

Smart Canteen

During the break time we always see there is too much rush at canteen for ordering food and Student wait for their order. So we will creating application that can manage everything online. The user of this application will be canteen owner and customer who want to order food. First customer order their food using online application and the information about the order will reach to canteen owner according to that he will start preparing it. On the customer side customer can track everything about his order (how much time it will take, and time when to takeaway order) basically the customer is able to track his order. The QR code will be generate on the customer side which will be unique and when customer takeaway his order at that time that will be scan by canteen owner to authenticate the person order the food. Online payment facility also provided on customer side and after successful payment then his payment receipt will generate. At the both side the history of orders will be available. Canteen owner can change their menu according to the availability.
